Key Elements for Wireless Terminals to Access WiFi

SSID&Password

SSID and password must be provided.

DHCP Server

IP addresses must be assigned to wireless terminals ,otherwise the terminals will disconnect from the wireless network.

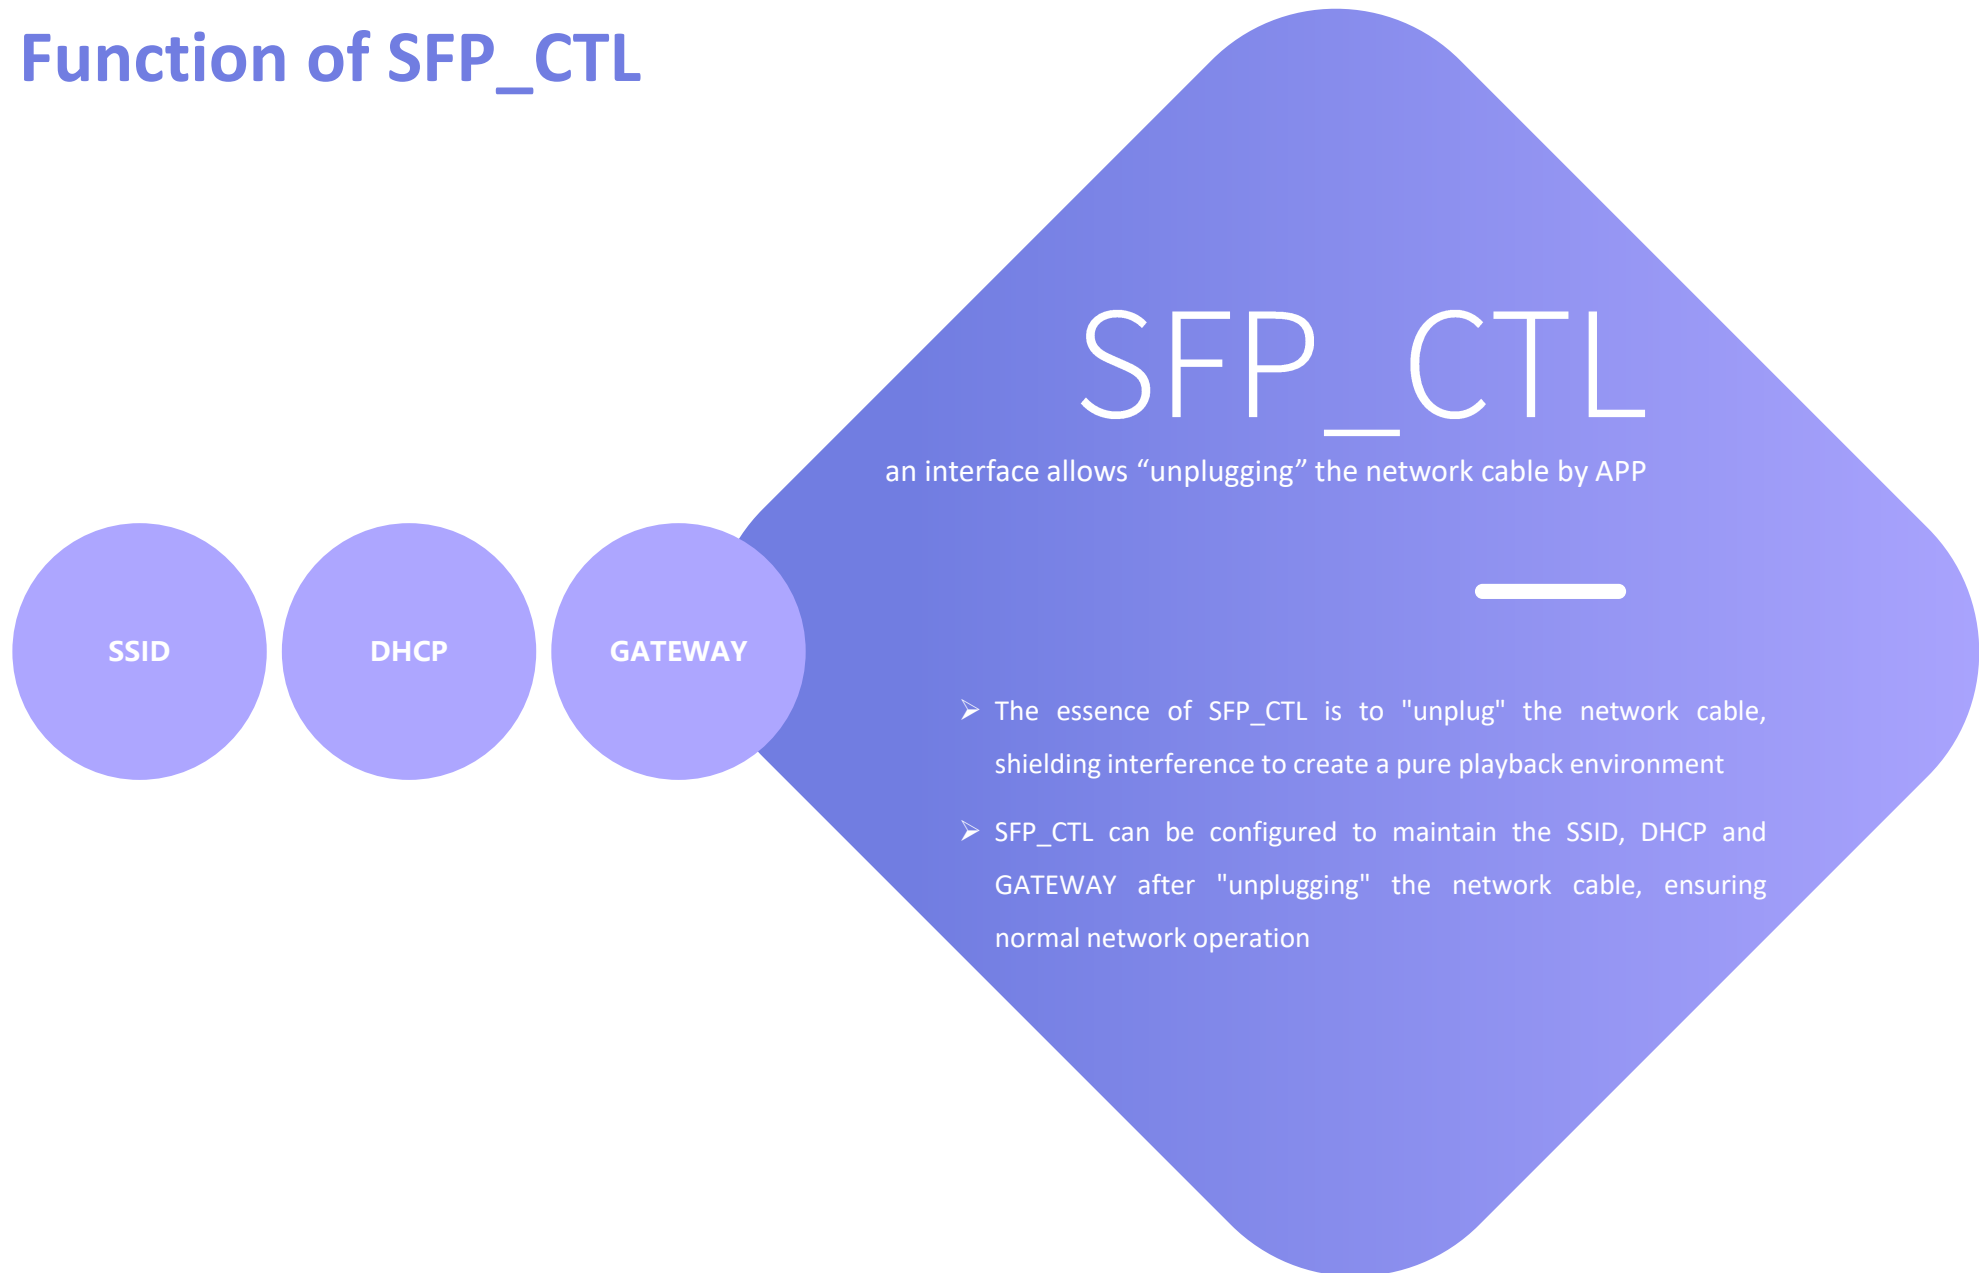

Gateway

Wireless terminals must know to whom to send data when accessing the Internet, otherwise they will disconnect from the wireless network.

The Function of SFP_CTL

Choose NA3 or NA3S

| Mode | Scenario | Network/Device/Audio Source Requirements | NA3 | NA3S | SFP_CTL Function | Topology |
|---------|-----------|--|-----|--------------------|--|---|
| AP | Scenario1 | <ul style="list-style-type: none"> Network cable near the digital music player Listen to both internet music and LAN music With a HiFi switch | ✓ | ✓ (Scenario2/3) | |  |
| | Scenario2 | <ul style="list-style-type: none"> Network cable near the digital music player Listen to both internet music and LAN music HiFi switch (Optional) | | ✓ | Disconnect SFP_CTL to block interference from the home main router |  |
| | Scenario3 | <ul style="list-style-type: none"> Network cable near the digital music player Listen to both internet music and LAN music HiFi switch (Optional) | | ✓ | Disconnect SFP_CTL to block interference from wireless terminals and home networks |  |
| AP+DHCP | Scenario4 | <ul style="list-style-type: none"> No network cable near the digital music player Only listen to LAN music (no internet connection) With a HiFi switch | ✓ | ✓ (Scenario6) | |  |
| | Scenario5 | <ul style="list-style-type: none"> No network cable near the digital music player Only listen to LAN music (no internet connection) No HiFi switch, but only digital music player connected | ✓ | ✓ (Scenario6) | |  |
| | Scenario6 | <ul style="list-style-type: none"> No network cable near the digital music player Only listen to LAN music (no internet connection) HiFi switch (optional), can connect multiple devices | | ✓ | Disconnect SFP_CTL to block interference from wireless terminals |  |
| AP+STA | Scenario7 | <ul style="list-style-type: none"> No network cable near the digital music player Listen to both internet music and LAN music With a HiFi switch | ✓ | ✓ (Scenario9) | |  |
| | Scenario8 | <ul style="list-style-type: none"> No network cable near the digital music player Listen to both internet music and LAN music No HiFi switch, but only digital music player connected | ✓ | ✓ (Scenario9) | |  |
| | Scenario9 | <ul style="list-style-type: none"> No network cable near the digital music player Listen to both internet music and LAN music HiFi switch (optional), can connect multiple devices | | ✓ | Disconnect SFP_CTL to block interference from wireless terminals |  |

AP Mode: Scenario1

Scenario1

- Network cable near the digital music player
- Listen to both internet music and LAN music
- with a HiFi switch

- Similar to USB product, purify the network signals of wireless terminals and reduce interference
- The acoustic signature of NA3 can enhance sound quality

Default Mode, PnP

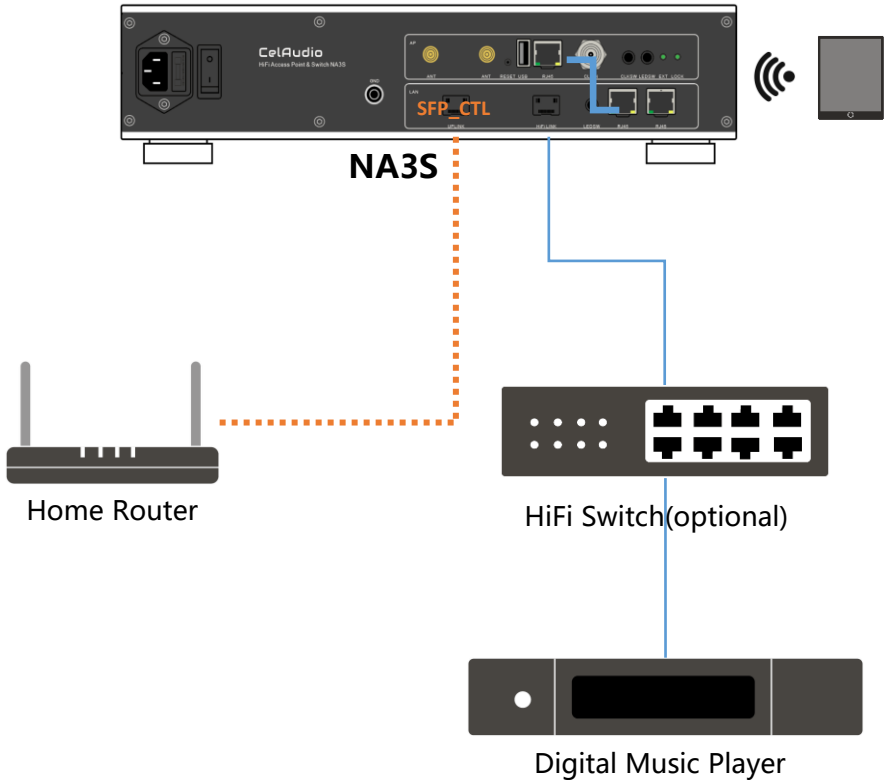

SSID&Pwd
NA3

DHCP
Home Router

Gateway
Home Router

AP Mode: Scenario2

Scenario2

- Network cable near the digital music player
 - Listen to both internet music and LAN music
 - HiFi switch (Optional)
-
- Disconnect SFP_CTL to cut off connection between NA3S and home main router, blocking interference from the home main router to the digital music player and enhancing playback sound quality
 - When SFP_CTL is disconnected, only LAN music can be played

Connect SFP_CTL

SSID&Pwd
NA3S

DHCP
Home Router

Gateway
Home Router

Disconnect SFP_CTL

Unplugging the network cable from the router will lose DHCP/gateway, NA3S will take over, the IP of NA3S will change, requiring a restart of nManager

SSID&Pwd
NA3S

DHCP
NA3S

Gateway
NA3S

AP Mode: Scenario3

Scenario3

- Network cable near the digital music player
- Listen to both internet music and LAN music
- HiFi switch (Optional)

- Disconnect SFP_CTL to cut off NA3S from HiFi switch/digital player, blocking wireless terminals and home networks from interfering with the digital player
- When SFP_CTL is disconnected, only LAN music can be played

Connect SFP_CTL

SSID&Pw
NA3S

DHCP
Home Router

Gateway
Home Router

Disconnect SFP_CTL

Wireless terminals can no longer access the digital player, which will operate in a purer playback environment

AP+DHCP Mode: Scenario4

Scenario4

- No network cable near the digital music player
 - Only listen to LAN music (no internet connection)
 - With a HiFi switch
-
- NA3 provides SSID/DHCP/gateway services, replacing ordinary routers and high-grade linear power supplies to completely eliminate the impact of home main routers on sound quality
 - Similar to USB product, purify the network signals of wireless terminals and reduce interference
 - The acoustic signature of NA3 can enhance sound quality

NA3 provides AP+DHCP services

Gateway
NA3

AP+DHCP Mode: Scenario6

Scenario6

- No network cable near the digital music player
- Only listen to LAN music (no internet connection)
- HiFi switch (optional), can connect multiple devices

- Disconnect SFP_CTL will remove the wireless connection from the HiFi network . Wireless terminals will be unable to access the digital player, and with the interference from wireless terminals shielded. The digital player can still play LAN music normally

Connect SFP_CTL

Wireless terminals can access the digital player for management

SSID&Pwd
NA3S

DHCP
NA3S

Gateway
NA3S

Disconnect SFP_CTL

Wireless terminals can no longer access the digital player, which will operate in a purer playback environment

AP+STA Mode: Scenario7

Scenario7

- No network cable near the digital music player
 - Listen to both internet music and LAN music
 - With a HiFi switch
-
- The wireless part of NA3 accessing the Home network is called STA, which is used for upstream Internet access, enabling the HiFi network to connect to the Internet so that the digital player can stream online music
 - In this scenario, the STA requires a static IP, which can be set via the configuration interface

STA side connects to the Home network
